Dear Sirs,I feel XM radio should be allowed to broadcast traffic and weather for the various cities. If the information is "public information" why should they not be allowed to air this? I think this service is great considering I can tune in to numerous cities and get the latest weather information or traffic up date while I am traveling. I do not need to hunt for long periods of time, wait for programing or commercials, just to go back to hunting again looking for this information while I am traveling.

Please vote no to HR4026.

Thank you.
